

# AUTOBOX 106

BIDIRECTIONAL

## AUTOBOX 106

**Autobox 106** is a vandal-proof speed camera site, specially designed to house the Autovelox 106 speed enforcement device by Sodi Scientifica, with reduced dimensions and weight compared to previous Autobox models. **Autobox 106** can be equipped with speed device, camera and visible or infrared LED flash.

### Bidirectional Detection

In case Autovelox 106 Premium is used, it is possible to carry out a bi-directional detection on roads having one lane for each direction.

Thanks to the rear side photo shooting, bi-directional detection allows for

- full respect of privacy
- detection of motorbike plates
- night use thanks to the two integrated flashes

**Autobox 106** can be installed, without any modification, on the right or left sides of the road and powered by mains, batteries or

solar panels.

### Security

**Autobox 106** is made of hot rolled steel, with a thickness of mm. 3.

The upper door is equipped with a double map security lock, while the service door is accessible only by acting on the internal unlocking mechanism. Both doors are protected by an anti-intrusion and vandal-proof system.

The portholes are made of polycarbonate with shatterproof characteristics and a special surface coating that allows easy removal of nitro-based spray varnish stains. If equipped with the infrared flash version, portholes are black colored, in order to hide the view of the instrument placed inside.

### “Turnkey” package and service

Sodi Scientifica can offer a full package of hardware, software and services that includes:

- flash
- router GSM \*
- REDS lite software
- OCR software
- roadside housing box Autobox 106
- transportation
- installation \*
- commissioning \*
- manufacturer's warranty on the whole enforcement system

*\*depending on the Country where the system is installed*
